

Don't Flush Trouble

Help! Stop Clogging Pipes, Don't Flush Wipes!

The label might say "flushable" but disposable wipes are clogging our sewer lines and damaging pumps and other equipment. Not only are these problems expensive to fix but they can also cause raw sewage overflows into homes, businesses, and local waterways.

Don't Flush Trouble - These Items Should *Not* Go Down the Drain!

Wipes, even those that are labeled "flushable or disposable"

- This includes nursing and diaper pads, baby, personal, cleaning, and facial wipes, and paper towels.
- These items, despite their claims, do not disintegrate quickly enough in sewer systems causing clogs in sewer pipes and treatment plant machinery and cost tax payers thousands of dollars in repairs and maintenance.

Medication

- Some medication can be broken down during the water treatment process, yet many drugs are able to pass unchanged through the process, directly entering the receiving environment.

Fats, Oils, Grease and Leftover Food

- Grease sticks to household and sanitary sewer pipes. Over time, grease build-up will block the entire pipe and result in raw sewage backing up into your home or overflowing into the street or waterway.
- Avoid use of garbage disposals as they can cause overload of solids, requiring more chemical use for treatment and could contaminate the receiving environment.

Other Items Including:

- Band-aids and bandage wrappers
- Condoms
- Cotton balls, swabs, and pads
- Dental floss and teeth whitening strips
- Hair
- Kitty Litter
- Mini and maxi pads
- Tampons and applicators
- Paint and other chemicals

Flushing the wrong things down the toilet damages your household plumbing, your environment, and the wastewater treatment system. If it isn't sewage or toilet paper, put it in the trash instead of the toilet.

Where should these items go?

Medications

Medications can be returned to pharmacies that participate in the medication return program. Inquire at your local pharmacy.

Wipes

Unfortunately, all wipes belong in the garbage; however, there are some environmentally friendly alternatives such as re-useable towels, mops, and cloth diapers.

Fats, Oils and Grease (FOG)

After cooking, small amounts of FOG can be wiped off with a paper towel and placed in the compost before washing in the sink or dishwasher; larger amounts of FOG should be poured into a plastic container and brought to a local compost site. Please check with your Municipality to determine if their facilities accept grease, if not dispose in the garbage.

You can use baskets or strainers in sink drains to catch food scraps and other solids, they can then be put in the compost. Remember to never put produce stickers down the drain.

Other items

Most of other items like band-aids, dental floss, condoms, and feminine hygiene products should only be put in the trash.
