Providence, RI 02908

RE: Phase I Environmental Site Assessment
20 Privilege Street, Plat 20A, Lot 15-11, Woonsocket, Rhode Island

Dear Ms. Simpson:

We are pleased to submit the enclosed report of the Phase I Environmental Site Assessment (ESA) for the above-referenced site. The site assessment was conducted in conformance with the Standard Practice E 1527-13 for Environmental Site Assessments published by the American Society for Testing and Materials (ASTM, 2013).

Note that ASTM E 1527-13 requires that certain elements of a Phase I ESA be updated if the data for the report is more than six months old. Therefore, if this report is to be relied upon after February 21, 2020, we recommend you contact us to discuss options.

We have identified several recognized environmental conditions associated with the Site. These are discussed in the conclusions of our report (Section 7).

In accordance with the requirements of the ASTM 1527-13 Standard, I declare that to the best of my professional knowledge and belief, I meet the definition of an environmental professional as defined in §312.10 of 40 CFR 312 and have the specific qualifications based on education, training, and experience to assess the nature, history, and setting of the subject property.

We have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Thank you for the opportunity to conduct this work. Please contact the undersigned if we can be of further assistance.

Sincerely,

Brian Kortz, CPG, LSP, CNU-A
Senior Project Manager

1 Introduction

Fuss & O'Neill, Inc. (Fuss & O'Neill) was retained by Rhode Island Department of Environmental Management (RIDEM) to conduct a Phase I Environmental Site Assessment (Phase I ESA) of the property located at 20 Privilege Street in Woonsocket, Rhode Island (the Site or subject site). We understand that RIDEM is conducting the Phase I ESA on behalf of the City of Woonsocket in anticipation of spurring commercial development of the Site.

1.1 Objective

The objective of this Phase I ESA was to identify recognized environmental conditions (RECs) present at the Site. As defined by Standard Practice for Environmental Site Assessments E 1527-13 developed by the American Society for Testing and Materials (ASTM, 2013), REC means:

... the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

1.2 Scope of Services

This Phase I ESA was performed using Standard Practice E 1527-13 for Environmental Site Assessments by the American Society for Testing and Materials (ASTM, 2013).

Unless otherwise stated in this report, assessments for asbestos-containing materials, PCB-containing building materials, lead-based paint or plumbing materials, radon gas, and mold were not conducted as part of this Phase I ESA. Furthermore, we did not investigate the potential for the Site to contain wetlands, endangered species, ecological resources or historic/cultural resources. Environmental compliance or permitting issues were not considered during this investigation.

As this Phase I ESA was prepared as part of an United States Environmental Protection Agency Brownfield's Assessment Grant awarded under the Comprehensive Environmental Response and Liability Act (CERCLA) 9604(k)(2)(b), an assessment of controlled substances was also conducted as part of this investigation.

Refer to Appendix A for the scope of work and restrictions of this ESA and to Section 9.0 of this report for limitations on this work product. The qualifications of the Environmental Professional and other staff involved in the preparation of this document are included in Appendix B.

2 Site Overview

2.1 Site Information

2.1.1 Property Location, Size of Parcel and Site Plan

The Site, 20 Privilege Street, was identified as City of Woonsocket Assessor's Map 20A, Lot 15-11 and located on the north side of Privilege Street in an I-2 Industrial zone of Woonsocket, Rhode Island (Providence County). A portion of a United States Geological Survey (USGS) topographic map showing the subject site location is provided as Figure 1.

According to City of Woonsocket records, the Site was a 4.09-acre irregular-shaped parcel owned by CNC International since 1988. Structures located on the subject site include a four-story, approximately 197,432 square foot mill building and a three-story, approximately 29,160 square foot mill building, both constructed in 1902. The Site was occupied by CNC International at the time of the inspection performed for this report, which is an organic chemical manufacturing facility. The company's primary activities involved the synthesis, formulation, packaging and distribution of specialty chemicals (e.g. flame retardants, defoamers of various types, anti-oxidants, surfactants, and detergents). A site plan is provided as Figure 2. A copy of the property description card available at the City Tax Assessor's office is attached as Appendix C. A description of the Site developed during the site inspection is presented in Section 6.0.

The northern Site property boundary was adjacent to the Massachusetts state line and the Town of Blackstone, Massachusetts. CNC International also owned and conducted operations on a contiguous 2.33-acre property, identified as the Town of Blackstone Assessor's Plat 4, Lot 29. The building structures were located on the Rhode Island portion of the property while the Massachusetts portion of the property was listed as vacant land. The Massachusetts parcel was not the subject of this Phase I ESA and is not considered part of the Site herein.

2.1.2 Environmental Justice Focus Areas

According to Rhode Island Department of Environmental Management (RIDEM) Environmental Resource mapping, the subject site was located within an Environmental Justice Zone. If additional assessment activities are conducted within an Environmental Justice Zone, public notification and outreach activities may be warranted in accordance with Section 1.8.7 of the RIDEM Rules and Regulations for the Investigation and Remediation of Hazardous Material Releases (Remediation Regulations).

2.1.3 Site Utilities

Water and Sewer

According to personnel at the Woonsocket Engineering Department and the Site owner, the Site has been served by municipal water since 1907 via Privilege Street. Municipal water was connected to the Site on three separate occasions: 1907, 1950, and 1985. Also, according to personnel at the Woonsocket Engineering Department, the Site has been served by municipal sewer since 1972 via Privilege Street.

Heat

The Site's buildings were heated by natural gas at the time of this report. According to the Site owner, fuel oil was used to heat the building until 2000 and was stored in an aboveground storage tank (AST) located outside the facility. A No. 6 fuel oil underground storage tank containing number 6 heating oil was also removed from the site in 2001.

Other Utilities

Electric, cable, and telephone service entered the Site via overhead wires located to the south of the Site along Privilege Street.

2.1.4 Adjoining Land Use

Based on observations made during the Site inspection and available mapping, properties adjoining the Site include the following:

Address	Description	Direction from Subject Site
1 Farm Street	Auto repair shop	Northwest
743 North Main Street	Cargo & freight company	West
28 Privilege Street	Freight shipping and trucking	East
100 Privilege Street	Gas station	East
9 Privilege Street	Heavy metal recycling facility	Southeast
95 Privilege Street	Auto parts store	Southeast
5 Privilege Street	Auto repair shop	South
726 Winter Street	Car wash	South
750 Winter Street	Self-storage facility	South

2.2 Environmental Setting

2.2.1 Physical Setting

Topography and Geology

The topography of the Site was generally flat. The regional topography gradually slopes down to the north and east towards Harris Pond (USGS, 2013).

Surficial material at the Site is mapped as Urban Land Complex, which is described as human-transported material (USDA, 2010).

Bedrock beneath the Site is mapped as undivided metaclastic rock and is described as red to gray to green polymict conglomerate, sandstone, and shale (Hermes, et al, 1994). Depth to bedrock was measured to be approximately 15 feet below grade (fbg) based on information reported in the 1988 Environmental Site Assessment Report by Garofalo Environmental Services Inc.

Hydrology and Hydrogeology

Groundwater

The groundwater beneath the Site was classified by RIDEM as GB (RIDEM, 2010b). GB groundwater is designated to be not suitable for public or private drinking water use. GB groundwater areas are typically located beneath highly urbanized areas, permanent waste disposal areas and the area immediately surrounding the permanent waste disposal areas (RIDEM, 2010a).

Based on USGS mapping and field observations of the local topography, observations from the 1988 Environmental Site Assessment report, and surface water hydrology, the inferred groundwater flow direction is to the north and east towards Harris Pond. Depth to groundwater was documented to be approximately 8 to 11 fbg, according to the 1988 Environmental Site Assessment Report. No field sampling, piezometric mapping, or water level gauging was conducted by Fuss & O'Neill to confirm the groundwater flow direction and depth.

Surface Water

The nearest surface water body, Mill River, was located approximately 150 feet north-northeast of the subject site (USGS, 2013) and flowed from Harris Pond in Massachusetts. Mill River was classified by RIDEM as class B (RIDEM, 2010c).

Class B waters are designated for fish and wildlife habitat and primary and secondary contact recreational activities. They should be suitable for compatible industrial processes and cooling, hydropower, aquacultural uses, navigation, and irrigation and other agricultural uses. These waters should have good aesthetic value.

Additionally, Mill River was identified in the State of Rhode Island 2016 303(d) List of Impaired Waters (RIDEM, 2016) as having been impacted due to enterococcus and fecal coliform.

2.2.2 Wetlands and Flood Zone Mapping

Based on the RIDEM Environmental Resource Map, no mapped wetlands were located on the Site. Note that Fuss & O'Neill did not independently determine wetland boundaries or the presence of wetlands as part of this assessment.

Based on the Federal Emergency Management Agency (FEMA) Flood Map 44007C0069G, no mapped floodplains were located on the Site.

2.2.3 Location of Public Water Supply Sources

The Groundwater Classification & Wellhead Protection Area Map of the Woonsocket quadrangle, available from RIDEM, showed no wellhead protection areas (WHPAs) within a one-half mile radius of the subject site.

2.3 Previous Environmental Investigations

A copy of the 1988 Environmental Site Assessment Report by Garofalo Environmental Services Inc. (Garofalo) was provided to Fuss & O'Neill by Mr. Bruce Moger, the current property owner. The report summarized below was reviewed as part of our Phase I ESA investigation. A copy of the report is provided in Appendix D.

An Environmental Site Assessment was conducted at the Site in July and August 1988. The site assessment included Site visits, a limited field evaluation program, and screening analysis of soil samples. Field investigations included the installation of three monitoring wells, field screening of soil samples, and the collection of soil and groundwater samples for laboratory analysis. Fill material was documented from 0 to 3 fbg in the soil boring located at Monitoring Well 2. Field screening results indicated the potential presence of volatile organics at this soil boring as well. Soil samples were sent for laboratory analysis of total petroleum hydrocarbons (TPH) and volatile organic compounds (VOC). Results of sample analysis indicated that contaminants were reported at or below laboratory detection limits. Groundwater samples were also sent for laboratory analysis of soluble metals, pH, specific conductance, polychlorinated biphenyls (PCBs) and VOC. Trace amounts of soluble metals were found in samples from all three monitoring wells but were below USEPA's maximum contaminant level goals. Results of PCBs were below laboratory detection limits and one VOC, 1,1,1-trichloroethane, was detected in the sample from Monitoring Well 2 in trace amounts. Concentrations of groundwater detections did not exceed RIDEM regulatory criteria. Based on the results of the field investigation, Garofalo concluded that no hazardous materials or petroleum products were released to the environment.

3 Site History

The following sources were used to develop the history of the Site and, to the extent required by ASTM Practice E 1527-13, the nearby properties:

- A summary of city street directories provided by Environmental Data Resources (EDR) for the years 1938, 1943, 1947, 1951, 1957, 1962, 1967, 1972, 1977, 1983, 1988, 1992, 1995, 2000, 2005, 2010, and 2014.
- Sanborn Fire Insurance Maps provided by EDR for the years 1898, 1903, 1911, 1950, 1955, 1963, 1965, 1967, and 1970.
- Aerial photographs for the years 1939, 1951, 1972, 1981, 1988, 1997, 2008, and 2019 in Appendix F (available online at from the Rhode Island Geographic Information System [RIGIS]).
- Historical USGS topographic maps for the years 1982 and 2013 list years, available from the Documents Department and Data Center of the University of New Hampshire (<http://docs.unh.edu/nhtopos/nhtopos.htm>).
- An interview with Mr. Bruce Moger, who has owned and managed the Site since 1988.
- Files and personnel at the City of Woonsocket offices of the City Clerk and Fire Department.
- Information obtained during the review of available files from RIDEM for the Site.
- Previous environmental investigations at the Site as discussed in Section 2.3.

The past uses of the Site and nearby properties based on the sources above are summarized below.

Site

According to the 1898 and 1903 Sanborn maps, the 20 Privilege Street lot was vacant prior to commercial development, which was noted by the property card as occurring during 1902. The 1988 Environmental Site Assessment Report indicated that the property was occupied by Lawton Spinning Mills until approximately 1935. The 1911 Sanborn map showed the two current mill buildings, which were utilized for cotton spinning, combing, and storage. Construction of the mill buildings must have concluded sometime between the 1903 and 1911 Sanborn mapping. The 1988 Environmental Assessment Report indicated the property was purchased by Philip Cohen in 1936 and was transferred to several other owners through 1973. According to the 1950 Sanborn map, the mill buildings were used as wool rag warehouses by a company named B. Cohen & Sons Inc. The previously labeled cotton combing room was expanded and utilized as a "card" room. According to the Site owner, Mr. Bruce Moger, the building was transitioned from a cotton manufacturing and storage warehouse sometime around 1930. Previous reports indicated that the Site was purchased by Hasbro Industries Inc. in 1973 and used for toy storage. CNC International purchased the site in 1986 and used the Site for textile chemical and paper chemical manufacturing. The textile portion of the business was sold and

discontinued in 1994. The 1988, 1997, 2008, and 2019 aerial photographs show the addition of ASTs, which were not apparent prior to 1988.

Nearby Properties

Sanborn maps indicated that the area was mostly developed as prior to 1898. The 1898 Sanborn map depicted industrial activity to the south, southwest, southeast and east of the Site, including the Harris Woolen Co. to the south and southeast, the Woonsocket Shuttle Company to the southwest, the Paint Shop and Barr Bro's Foundry to the east. A canal was positioned along the eastern border of the Site and connected to the Harris Woolen Co. property. Similar industrial and commercial activity was depicted in the 1903 Sanborn map, with the exception that the Harris Woolen Co. transitioned to the Lawton Spinning Co. cotton yarn facility and the Woonsocket Shuttle Company was used as a coal and wagon storage facility.

According to the 1911 Sanborn map, the Lawton Spinning Co. continued to operate to the south-southeast of the Site. The Paint Shop and Barr Bro's Foundry to the east were razed and vacant.

The 1950, 1955, and 1963 Sanborn maps and aerial photographs depicted substantial change to the southwest and southeast. The Lawton Spinning Co. commercial facilities to the southeast were razed and replaced by the Privilege Wrecking Co. The coal and wagon storage to the southwest was replaced by an auto junk yard. In addition, the 1950 Sanborn map depicted a motor fort shop with fuel oil tanks to the east and the Hartford Railroad to the west.

Similar industrial and commercial activity was depicted in the 1965, 1967 and 1970 Sanborn maps, with the exception that a concrete mixing plant was constructed to the southwest of the Site and a used auto sales facility replaced the auto junk yard to the southeast. Also, the motor fort to the east added filling stations.

4 Federal, State, and Local File Review

Files of Federal, State and local agencies were reviewed for environmentally-related issues pertinent to the subject site and nearby parcels, such as permits, inspection reports, enforcement history or documented releases of hazardous materials. The sources of information listed in the following table were researched to identify properties of concern within distances of the Site specified by ASTM Practice E 1527-13.

Information Source*	Search Distance
Federal Files	
National Priorities List (NPL)	1 mile
Delisted NPL Sites	0.5 mile
Resource Conservation and Recovery Act (RCRA) CORRACTS list (RCRA Site Subject to Corrective Action)	1 mile

Information Source*	Search Distance
Resource Conservation and Recovery Act (RCRA) Treatment, Storage or Disposal Facility (TSDF) List	0.5 mile
Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) List, including No Further Remedial Action Planned (NFRAP) sites	0.5 mile
RCRA Generators List	property and adjoining
RCRA No Longer Regulated (NLR) List	property and adjoining
Federal Institutional / Engineered Control List	property only
Emergency Response and Notification (ERNS) List	property only
State Files	
Hazardous Waste Site List (State sites equivalent to NPL)	1 mile
Hazardous Waste Site List (State sites equivalent to CERCLIS)	0.5 mile
Landfill and Solid Waste Site	0.5 mile
Leaking Underground Storage Tank (LUST) List	0.5 mile
State Voluntary Clean-up or Brownfield Sites	0.5 mile
Oil & Chemical Spills Database	property and adjoining
Registered Underground Storage Tank (UST) List	property and adjoining
State Institutional / Engineered Control List	property only

*Fuss & O'Neill used EDR, an environmental database search service, to obtain the information referenced in the above table. EDR provides access to publicly available environmental databases maintained by various Federal, State, and local agencies. A copy of the information provided by EDR relative to the subject site and nearby properties is included in Appendix E. The listed information sources are defined and described in detail in the EDR report.

4.1 Summary of Regulatory Database Information

Site

The environmental databases provide the following information for the Site:

- **Underground Storage Tank (UST):** One 3,000-gallon No. 6 heating oil UST was listed at the 20 Privilege Street property. According to the property owner, Mr. Moger, the UST was closed and removed during 2001.
- **RI SPILLS:** The Site was listed in the RI SPILLS database for three separate dates. During a July 1999 event, a truck of isopropyl alcohol became unattached, and the tank fell to the ground. During an August 2001 event, an unknown amount of oil was released. A third release was documented, but the specifics of the release were not recorded.

- RCRA-SQG: The Site was listed as a Resource Conservation and Recovery Act (RCRA) small quantity generator of hazardous waste.
- ASTs: Six ASTs were listed at the Site. Two of the ASTs were reported as 4,300 gallon, permanently closed tanks with unlisted contents. The remaining four ASTs were reported as in-use. The ASTs included a 5,100-gallon and 7,400-gallon No. 2 heating oil, and two 3000-gallon tanks with unlisted contents stored inside.
- RI AIRS: The property was listed in the RI AIRS database for emissions.

This information is discussed further in Section 4.2.

Nearby Properties

As reported in the EDR Report in Appendix E, several properties were identified in the environmental databases within the minimum search radii required by ASTM Practice 1527-13. Based on distance from the Site and the local hydrogeology, these parcels are not anticipated to have a negative effect on the Site, with the following possible exceptions:

- Fairlawn Oil: 100 Privilege Street – This property was located approximately 0.1 mile southeast of the Site and was listed as a SPILLS property and LUST property. A spill of No. 2 oil was reported for this property in December 1989. No further information was provided. In addition, the property had a reported LUST in December 1985 and was required to perform soil removal only.
- Sandy's Towing & Repairing Inc.: 633 Winter Street – This property was located approximately 0.196 mile southwest of the Site and was listed as having six permanently closed USTs. The USTs included four 3000-gallon gasoline, one 300-gallon waste oil, and one 500-gallon No. 2 heating oil. The property was listed as a small quantity generator of hazardous waste. According to the EDR Report, the property had a reported LUST (Leaking Underground Storage Tank) and was required to perform soil removal only.
- Chicken Power: 601 Winter Street – This property was located approximately 0.219 mile southwest of the Site and was listed as having one permanently closed 500-gallon No. 2 heating oil UST.
- Penguin Enterprises: 581 North Main Enterprises – This property was located approximately 0.226 mile southwest of the Site and had a reported LUST, which required soil removal only. The property was listed as having one permanently closed 2000-gallon No. 2 heating oil UST.
- North Main Realty LLC: 565 North Main Street – According to the EDR Report, this property was located approximately 0.235 mile southwest of the Site and was listed as having one permanently closed 5000-gallon UST of an unknown substance.
- Woonsocket Glass & Mirror: 500 Pond Street – This property was located approximately 0.251 mile southwest of the Site and had a reported LUST, which required soil removal only.

Due to the inferred groundwater flow direction and/or the proximity of these properties to the Site, the potential exists for releases that occur at these properties to migrate to and have an adverse impact on environmental quality at the Site. However, contamination which has migrated to the Site from an up-gradient source may not be the responsibility of the Site owner, solely due to ownership.

4.2 State File Review

A State file review was performed by Fuss & O'Neill for the subject site on September 11, 2019. Files for the Site available from RIDEM are discussed below. Copies of pertinent files are presented in Appendix G.

- An application for Underground Storage Facilities dated September 9, 1988. The application stated the year of operation commenced in 1985 and that no leaks or spills had occurred at the facility prior to the date of the application.
- A Letter of Deficiency from the RIDEM Office of Air Resources on April 10, 1997. The letter stated that CNC International Inc had not submitted an application for an operating permit, which was due on March 1, 1997.
- An Aboveground Tanks Inspection Form by RIDEM dated May 20, 1997. The report included a sketch of 14 ASTs located in the outside tank farm. Five tanks were inspected, including a 5,000 gallon No. 2 heating oil and 7,410-gallon petroleum tank. The other three tanks were unidentified. The report noted the Site had a sufficient number of wells to determine groundwater contamination.
- A Letter of Deficiency from the RIDEM Office of Compliance and Inspection on May 29, 1997. The letter stated that CNC International was out of compliance, as an AST was not properly equipped with a gauge or high level alarm and the owner of the facility was not conducting monthly inspection reports.
- An Emergency Response Report from RIDEM dated June 21, 2017. Complaint type was for an AST inspection. The investigator noted nine tanks on an outdoor cement containment area. Seven of the nine tanks were reported empty, one was filled with a small amount of alcohol, and the other stored approximately 200 gallons of heating oil.
- An Emergency Response Report from RIDEM dated August 21, 2017. Complaint type was for an emergency response. The investigator noted a small fire within the chemical building. Vandals spilled several containers of chemicals which caused three police officers to be taken to the hospital for exposure. The spilled containers were identified as defoamers and surfactants.
- A Notice of Intent to Enforce from the RIDEM Office of Compliance and Inspection dated February 2, 2018. The letter indicated that CNC International failed to comply with the RIDEM Rules and Regulations for Hazardous Waste Management due to storage of universal waste and solid waste on-Site. A RIDEM inspection on August 17, 2017 revealed approximately 2.5 cubic yards

of small containers holding hazardous chemicals and several potential hazardous waste violations.

4.3 Local File Review

The following record of ownership for the Site was obtained from records maintained by the City of Woonsocket's Clerk's office. Note that this review does not constitute a full title search. Further information regarding property ownership and transfer was available in the 1988 Environmental Site Assessment Report. This information was provided in Section 3.

A.P. 20A Lot 15-11

Date	Volume/Page	Grantor	Grantee
07/1983	572/046	Hasbro	City of Woonsocket
12/1988	723/175	Not listed	CNC International

On September 12, 2019, Fuss & O'Neill reviewed files available from the City of Woonsocket offices of the Town Clerk, Tax Assessor and Building Department regarding environmental concerns at the Site and surrounding properties. No environmental concerns were identified for the Site. Copies of pertinent files are included in Appendix C.

Also, as part of this assessment, Mr. Allen Tevyaw of Fuss & O'Neill interviewed personnel at the City of Woonsocket's Fire Marshal's office on September 4, 2019. Personnel from the Fire Marshal's office indicated that they did not have any knowledge of releases or threatened releases of hazardous substances at the Site. The only record that was available for the Site was the closure of a 3,000-gallon No.6 heating oil UST during 2001.

5 User-Provided Information

ASTM Practice E 1527-13 describes certain tasks to be performed by the user of this assessment that will help to identify RECs at the Site if they exist. ASTM Practice 1527-13 defines the user as "the party seeking to use Practice E 1527 to complete an environmental site assessment of the property." Users can include a potential purchaser or tenant of the Site, a lender, a property manager, or a Site owner.

As part of our agreement to conduct this work, we provided Mr. Scott Gibbs with a User Questionnaire. Mr. Gibbs is the President of The Economic Development Foundation of Rhode Island and was identified by City personnel as the Site contact. According to Mr. Gibbs, no information was known about the Site to complete the User Questionnaire. Due to his lack of knowledge about the Site, Mr. Gibbs did not return a completed questionnaire or provide information pertaining to the items listed below as of the date of this report:

- Record of Environmental Liens or Environmental Land Usage Restrictions
- Specialized Knowledge or Experience of the User
- Commonly Known or Reasonably Ascertainable Knowledge

- Property Valuation, Reduction for Environmental Issues

Note that the All Appropriate Inquiry Federal Rule recommends that the user provide certain information to the environmental professional. However, the rule does not require that the information be provided. In the event the information is not provided, the environmental professional is instructed to consider the lack of information as a data gap and evaluate the significance of the data gap. Therefore, the lack of user provided information is considered a data gap and is addressed in further detail in Section 7.1.

6 Site Reconnaissance and Interviews

6.1 Interviews

Owner/Key Site Manager

As part of this Phase I ESA, Mr. Allen Tevyaw and Ms. Patricia Gagnon of Fuss & O'Neill interviewed Mr. Bruce Moger, owner of CNC International. Mr. Moger has owned and managed the Site since December 1988. Mr. Moger provided the following information:

- The facility currently manufactures a variety of all-purpose cleaning products, waxes, and oil-based defoamers.
- Prior to commercial development, undocumented fill material was brought onto the Site and used to fill in the surrounding wetland.
- The facilities were heated with fuel oil until 2000.
- Some portions of the first floor were slab on grade, whereas others were wooden flooring on grade.
- Mr. Moger pointed to a section of exposed grade under the wooden floor boards and stated that it most likely contained fly ash and other types of urban fill.
- Two storm water drains, located between the two mill buildings, backed up and flooded the property sometime in the past.
- A transformer that was owned by National Grid was located along the eastern side of the main-operational building and was on-Site since Mr. Moger purchased the property in 1988.
- Two of the ASTs on the Site currently contained hydrochloric acid. Another AST, located within the outside tank farm, previously stored isopropyl alcohol up until three months ago.

6.2 Site Reconnaissance

The Site reconnaissance was conducted on September 12, 2019 by Mr. Tevyaw and Ms. Gagnon, of Fuss & O'Neill, accompanied by Mr. Bruce Moger, of CNC International. The Site reconnaissance included a review of Site files and a Site inspection. Pertinent information from the files is discussed below. The inspection included the physical observation of the interior and exterior of both mill buildings located on-Site and the site grounds. Photographs taken during the Site inspection are presented in Appendix I.

Site Description

The Site consisted of a 4.09-acre, irregular-shaped parcel improved with a four-story, approximately 197,432 square foot mill building (Building 1), a three-story, approximately 29,160 square foot mill building (Building 2), and associated parking areas. The paved parking areas were located to the north and east of Building 1. A former parking area, now overgrown with vegetation, was located to the west of Building 1. Refer to Figure 2 for a site plan.

Buildings

Located on the Site were two mill buildings. The Site's main-operational building had four floors as well as a basement. The entrance to the building was on the first floor, adjacent to Privilege Street. During the Site reconnaissance, the majority of the Site's main building was unoccupied, with the exception of the first floor. This building will be referred to as Building 1. The Site's second building had three floors and was located to the northwest of the main-operational building. Access to the second building was on the first floor. During the Site reconnaissance, the second building was unoccupied. This building will be referred to as Building 2.

Building 1

Basement

The four-story building's basement only extended beneath the southern half of the building's total area. The entire basement space was used for storage. Storage items included miscellaneous pieces of scrap metal, wooden pallets, wooden boards, steel pipes, soil piles, trash piles, old furniture, glass windows, paint cans, and hand tools.

The basement's brick walls were observed to have peeled and/or chipped paint. The floor, which was a concrete slab, was observed to have multiple oily dark black stains, cracks, and holes. Light brown, brownish-red, white, and black powders were observed on the basement floor in various locations. Along the western edge of the basement, a trench was cut through the concrete slab exposing underlying soil. Miscellaneous litter and debris was noted in the trench. Soil color under the slab was observed as black, dark brown, and white.

The ceiling consisted of wooden planks from upper level flooring. Multiple sections of the ceiling displayed rotting from upper-level leaks. Lighting was hung from the ceiling boards and was noted as fluorescent lighting.

On the southwest end of the basement, a decommissioned furnace was observed. In front of the furnace was a square cut hole through the concrete slab, with stairs leading to the base. The bottom of the hole appeared to expose the underlying soil. Material along the eastern edge of the hole was observed to be black but transitioned to a reddish-brown color near the furnace opening. Wood and metal debris was also observed in the hole.

First Floor

The first floor included four office rooms, two bathrooms, two hallways, a boiler room, and a storage, packaging, and mixing room, which comprised a majority of the first floor space. The office rooms, hallways, and bathrooms were located on the southern end of the building. The office areas were carpeted and had either drop or drywall ceilings. A substantial water leak was observed in Mr. Moger's office, which had resulted in both stained and peeled paint. Lighting was hung from the ceiling and was noted as fluorescent lighting.

The boiler room was located on the southern end of the building. According to Mr. Moger, the boiler room was decommissioned in the late 1990s, sometime after CNC International ceased using their boilers. Two boilers and a Hylander Ultrafilter system were observed in the room. The boilers were rusted and had portions of the metal casing detached. The boiler room was in poor condition, as both moss and mold were observed growing on the floor and walls. Metal floor grates were observed under the boilers.

The storage, packaging, and mixing room extended from the office space to the northern edge of the facility. Upon entering the room, multiple shelving units were observed with miscellaneous chemical containers. Stains were noted both on various containers and shelves. To the north of the shelving units, a sewer outfall was observed. According to Mr. Moger, the outfall has not been used in the last ten years.

The remainder of the space was used for CNC International's chemical operations. Filled 55 gallon drums of various chemicals, including but not limited to sulfuric acid, isopropyl alcohol, mineral spirits, methanol, toluene, and xylene were observed. Mr. Moger provided Fuss & O'Neill with an inventory of raw materials purchased in 2018, which included several surfactants, acids and bases, solvents, oils, rheology modifiers, waxes, silicone, preservatives, dyes, and perfumes. This inventory is provided in Appendix H. Some drums were observed in poor condition and showed signs of bulging, rust, and cracks. Mr. Moger stated that some of the poor conditioned drums were empty. Puddles of water were noted throughout the space, which Mr. Moger attributed to roof leaks. Mr. Moger also stated that water leaks into the facility had been a recurring issue since his purchase of the property.

According to Mr. Moger, the portions of the building that did not have a basement were slab on grade, whereas others were wooden flooring on grade. Sections of the wooden flooring were noted as buckling and/or missing entirely. Grade was observed directly under missing sections of wooden flooring during the Site visit. Multiple dirt and waste piles were observed on the floor in the western section of the space. Dirt colors included gray, brown, and brownish-red hues. Various colored stains were also noted throughout the space, mostly around the base of drums and containers.

Second Floor

At the time of the Site visit, the second floor was unoccupied. According to Mr. Moger, the previous tenant used the space for bungee manufacturing. When the tenant decided to vacate the property, they left all of their manufacturing equipment behind. Mr. Moger stated that the second floor has been used strictly for storage ever since, both for his items and the left-behind bungee equipment.

Multiple pallets of miscellaneous chemical 55 gallon drums were observed throughout the second floor. Most drums appeared to be in good condition, with the exception of a few that showed signs of bulging. Open packages of unlabeled powdered material were noted on several wooden pallets.

Dark stains were observed on the wooden floor boards within close proximity of chemical containers. Sections of the wooden flooring were noted as buckling and/or missing entirely. The ceiling consisted of wooden planks and displayed rotting from upper-level leaks. Lighting was hung from the ceiling boards and was noted as fluorescent lighting.

Third Floor

Similar to the second floor, the third floor was unoccupied at the time of the Site visit. According to Mr. Moger, the third floor was currently only used for storage of his own miscellaneous items and furniture. A few-scattered drums and cleaning products were also observed in the space. Mr. Moger stated that in 1988, the third floor was used by Gerber Baby Food for stuffed animal shipping and storage. For shipping purposes, Gerber constructed a conveyer belt from the third floor to the northern parking lot. However, the conveyer belt was no longer present.

Fourth Floor

The fourth floor was vacant during the Site inspection. According to Mr. Moger, the fourth floor has been used for storage since his purchase of the property. Similar to the second floor, multiple pallets of miscellaneous chemical drums were observed throughout the space. Most drums appeared to be in good condition, with the exception of a few that showed signs of bulging and rust. Closed paper packages of unlabeled powdered material were noted under blue tarps on the south end of the building.

Building 2

As previously stated above, all three floors of the building were vacant at the time of the Site visit. According to Mr. Moger, the three-story building had been strictly used for storage since he purchased the property in 1988. Mr. Moger also stated that the building did not have functioning electricity due to prior acts of vandalism and theft.

First Floor

The entrance to the first floor was located on the southern end of the building. Upon entering the building, a torn open container of white powder was observed. The contents of the container were observed on the surrounding concrete flooring. An elevator was observed adjacent to the building

entrance, which according to Mr. Moger, used to service all three floors. However, it was no longer in use. The concrete floor was observed to be in fair condition, with some cracking and staining observed.

Second & Third Floors

The second and third floors were similar to the first floor, with the exception that no filled drums were observed and the flooring was wood. Stored items included empty cardboard and plastic containers. Mold was observed on the floor boards, ceiling boards, and cardboard containers.

Parking Lot and Grounds

An inspection of the perimeter of the buildings was conducted during the Site reconnaissance. Separating the two buildings was a cracked cement walkway with a substantial amount of overgrown vegetation. Overgrown vegetation and cracked concrete were also observed to the west of the southern portion of Building 1. Two storm water drains were noted on the grounds on the southwestern portion of the property, which, according to Mr. Moger, discharge at the storage facility located on 750 Winter Street. Mr. Moger also stated that sometime in the past, the stormwater drains became blocked and flooded his property.

During the Site reconnaissance, Mr. Moger pointed out the previous location of a No. 6 heating oil UST, which was removed in 2001. According to Mr. Moger, the UST was located adjacent to the southwestern edge of Building 1. Also during the Site visit, nine ASTs were observed on the grounds. The ASTs were stored on top of a concrete slab and appeared to be in poor condition. Mr. Moger stated that one AST had No. 2 heating oil, two had hydrochloric acid, and one previously had isopropyl alcohol. Mr. Moger did not specify what was stored in the remaining ASTs.

The paved parking areas were located to the north and east of Building 1. Major and minor cracks were observed in the asphalt, with local vegetation growth. Catch basins and manholes were present throughout the parking area. Also, ponding of standing water was noted throughout the space.

Along the eastern edge of the Site, Mr. Moger pointed out an old, decommissioned diesel engine pump house. Mr. Moger stated an underground canal used to deliver water from Harris Pond to the Harris Woolen Company formally located to the south of the Site. Mr. Moger stated that the pump house was never operational during his tenure as the Site owner.

Also observed along the eastern edge of the Site was a fenced National Grid transformer. Mr. Moger stated that the transformer supplied electricity to the surrounding properties, was not a National Grid easement, and had been on the Site since the time of his purchase. No labels were visible on the transformer, so it was not possible to determine the age.

Adjoining Properties

To the south of the Site across Privilege Street was the North Main Self Storage building at 750 Winter Street and the auto repair shop Automotive Logistics at 5 Privilege Street. To the southeast of the Site was the Heavy Metal Recycling facility at 9 Privilege Street. To the east of the building was a surface

parking lot owned by the Service Transport Group at 28 Privilege Street. To the west of the building was a surface parking lot owned by St. Germain's Warehouse Company Inc at 743 North Main Street.

No areas of environmental concern were identified for the adjoining properties.

Controlled Substances

No evidence indicating the presence or past presence of controlled substances, as defined in the Controlled Substances Act (21 U.S.C. 802), was observed at the subject site during the inspection conducted for the Phase I ESA.

7 Data Gaps, Findings and Conclusions

7.1 Data Gaps

Standard Practice E 1527-13 requires the identification and evaluation of data gaps, which are defined as a lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information. Data gaps identified during the completion of this investigation include the following:

As mentioned previously, Mr. Gibbs did not return the User Questionnaire provided to him by Fuss & O'Neill for the purposes of this assessment. Sufficient information was obtained during the Site inspection, owner interview, and historical research to allow Fuss & O'Neill to evaluate for the presence of RECs at the subject site. Therefore, the lack of a completed User Questionnaire, as well as other data failures discussed previously in this report, was not considered to have a significant impact on our ability to identify RECs at the subject site. However, as information regarding a review for environmental liens on the Site was not documented by the User, we were not able to evaluate or present information regarding this subject as part of this report.

7.2 Findings and Conclusions

Fuss & O'Neill, Inc. prepared this Phase I ESA report in general conformance with the scope and limitations of ASTM Practice E 1527-13. Any exceptions to, or deletions from, this practice are described in Appendix A of this report.

7.2.1 Identified RECs

This assessment has revealed no evidence of RECs in connection with the Site, except for the following:

- REC #1: Historical UST: One 3,000 gallon No. 6 heating oil UST was listed at the 20 Privilege Street property. According to the property owner, Mr. Bruce Moger, the UST was closed and removed during 2001. However, no closure documentation was available in records reviewed by Fuss & O'Neill. As with any underground tank system, there is the potential for subsurface releases to have occurred due to leaks in the tank or piping.

- REC #2: Presence of Urban Fill: Soil on the Site is listed by the USDA as Urban Fill Complex. According to Mr. Moger, prior to commercial development of the Site, urban fill was transported to the property to fill in the surrounding wetland. A previous environmental investigation indicated the presence of fill on the property. In addition, Mr. Moger stated that the grade under the first floor wooden boards most likely contained fly ash. The nature and source of the material utilized to fill the Site is unknown and may impact the environmental quality of the Site.
- REC #3: Current and Historical ASTs: The Site was observed to have an AST farm on the grounds with both active and inactive ASTs containing No. 2 heating oil, hydrochloric acid, and isopropyl alcohol. At the time of the Site visit by Fuss & O'Neill, nine ASTs were identified. Historical documents obtained from RIDEM revealed the tank farm once included up to 14 ASTs. Deficiencies with respect to the AST farm were noted by RIDEM in 1997, and no additional documentation regarding the addressing of the deficiencies or their compliance status was available in records reviewed for this report.
- REC #4: Hazardous Material Handling and Storage: Various sized drums and chemical containers were observed on the first, second, third, and four floors of the main-operational building (Building 1). The building has been used for various operations, including the synthesis, formulation, packaging and distribution of specialty chemicals (e.g. flame retardants, defoamers of various types, anti-oxidants, surfactants, and detergents), which includes the storage and handling of solvents and oil-based products. CNC International was also listed as a RCRA small quantity generator of hazardous waste. Furthermore, in February 2018, RIDEM issued a Notice of Intent to Enforce for several potential hazardous waste violations, and no additional information was available in the RIDEM file. Improperly stored hazardous material could potentially lead to releases of these materials to the subsurface and impact the environmental quality of the Site.
- REC #5 Historical Spills: Multiple spills were recorded in the RIDEM and EDR files. The source or origination for each release listed was not identified. One of the spills that was detailed included the release of defoamers and surfactants. As with any release, there is potential for adverse impacts to the Sites environmental quality.

Although not considered RECs, we identified the following conditions at the subject Site:

- A National Grid transformer along the eastern edge of the Building 1. Mr. Moger stated that the transformer has been on the Site since he purchased the property in 1988. No release or threat of release was observed at the time of the Site inspection.
- Small amounts of debris were found throughout the Site. This debris should be removed the surrounding grounds observed for evidence of a release (including staining, stressed or dead vegetation, or odors).

Historical RECs

ASTM 1527-13 defines historical RECs (HRECs) as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted residential use criteria established by a regulatory authority, without subjecting the property to any required controls (e.g., property use restrictions, ELURs, institutional controls, or engineering controls). No HRECs associated with the Site were identified.

Controlled RECs

ASTM 1527-13 defines controlled CRECs (CRECs) as an REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (e.g., as evidenced by the issuance of a "No Further Action" letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (e.g., property use restrictions, ELURs, institutional controls, or engineering controls). No CRECs associated with the Site were identified.

7.2.2 Potential Off-Site Concerns

Petroleum releases were documented in areas nearby and upgradient (inferred) of the Site. These releases were generally small and appear to have been adequately addressed. However, contamination which has migrated to the Site from an up-gradient source may not be the responsibility of the Site owner, solely due to ownership.

7.2.3 Appropriateness of Investigations

Fuss & O'Neill has followed the guidelines described in ASTM E1527-13 to identify the RECs at this Site in a manner consistent with standard practice in the industry. However, as indicated in the ASTM standard, "No environmental site assessment can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with a property, and the practice recognizes reasonable limits of time and cost."

In accordance with Section 12.6.1 of ASTM Standard Practice E 1527-13, the appropriateness of additional investigations necessary to determine the presence or absence of identified RECs was evaluated. Based on the opinion of the Environmental Professional, no additional investigations would be necessary to confirm that the conditions specified in Section 7.2.1 are RECs in accordance with ASTM standards.

Based on the RECs identified above, additional assessment activities, including sampling of environmental media (e.g. soil, groundwater) proximal to the REC locations, may be warranted to evaluate for a release of oil and/or hazardous materials to the subsurface.

7.2.4 Results of Non-ASTM Scope Investigations

Although not part of the scope of this Phase I ESA, due to the age of the building (constructed prior to 1978), we identified the potential for the building to contain lead-based paint, asbestos, PCBs in transformers and/or building materials, and fluorescent light ballasts. Potential asbestos containing materials observed during the Site inspection included, but are not limited to, boiler components, insulation, mastics, caulking, and roofing materials. These items, when well maintained, would likely present little environmental risk to the grounds of the Site; however, these items may be future liabilities during construction, renovation, or demolition projects.

Furthermore, we did not specifically investigate the potential for the Site to contain wetlands, endangered species, ecological resources or historic/cultural resources. These items would likely present little risk to subsurface conditions and would not result in the identification of RECs; however, they could be liabilities especially during construction, renovation, or demolition projects. Additionally, environmental compliance or permitting issues were not considered during this investigation.

7.2.5 Continuing Obligations

Land usage restrictions on the Site property were not identified in files reviewed for this report. Therefore, no continuing obligations with respect to land usage restrictions were identified. However, the RECs identified above may pose a potential threat of a release or future release to the environment, and sampling of environmental media proximal to the RECs is recommended. Furthermore, the RECs included the documentation of regulatory deficiencies or non-compliance with no additional documentation of the compliance status. Therefore, the Site owner may be required to meet certain continuing obligations, which include taking reasonable steps with respect to hazardous substances releases and complying with regulatory requirements. If a release is identified in the future, reasonable steps must be taken to protect human health and the environment and address applicable regulatory obligations.

9 Limitations of Work Product

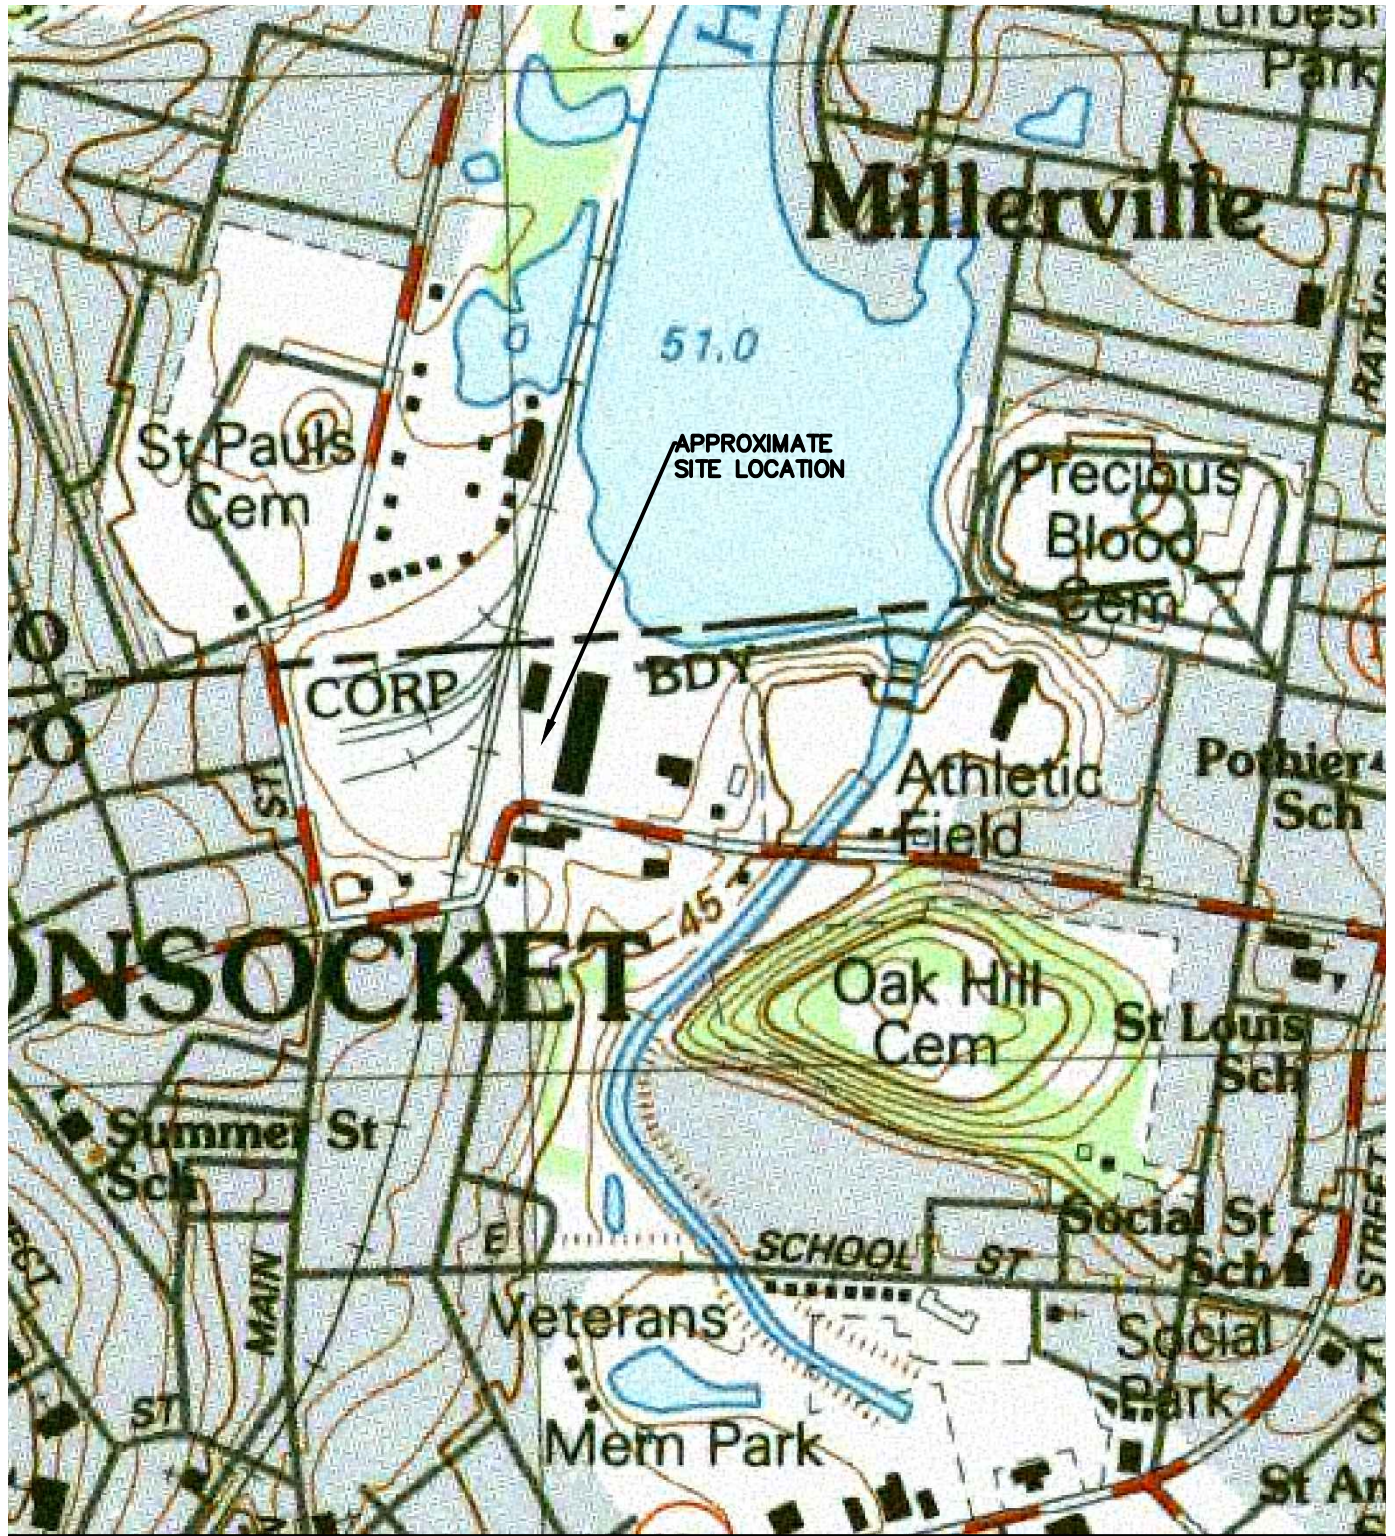

This document was prepared for the sole use of the Rhode Island Department of Environmental Management, the only intended beneficiaries of our work. Those who may use or rely upon the report and the services (hereafter "work product") performed by Fuss & O'Neill, Inc. and/or its subsidiaries or independent professional associates, subconsultants and subcontractors (collectively the "Consultant") expressly accept the work product upon the following specific conditions.

1. Consultant represents that it prepared the work product in accordance with the professional and industry standards prevailing at the time such services were rendered.
2. The work product may contain information that is time sensitive. The work product was prepared by Consultant subject to the particular scope limitations, budgetary and time constraints and business objectives of the Client which are detailed therein or in the contract between Consultant and Client. Changes in use, tenants, work practices, storage, Federal, state or local laws, rules or regulations may affect the work product.
3. The observations described and upon which the work product was based were made under the conditions stated therein. Any conclusions presented in the work product were based solely upon the services described therein, and not on scientific or engineering tasks or procedures beyond the scope of described services.
4. In preparing its work product, Consultant may have relied on certain information provided by state and local officials and information and representations made by other parties referenced therein, and on information contained in the files of state and/or local agencies made available at the time of the project. To the extent that such files which may affect the conclusions of the work product are missing, incomplete, inaccurate or not provided, Consultant is not responsible. Although there may have been some degree of overlap in the information provided by these various sources, Consultant did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this project. Consultant assumes no responsibility or liability to discover or determine any defects in such information which could result in failure to identify contamination or other defect in, at or near the site. Unless specifically stated in the work product, Consultant assumes no responsibility or liability for the accuracy of drawings and reports obtained, received or reviewed.
5. If the purpose of this project was to assess the physical characteristics of the subject site with respect to the presence in the environment of hazardous substances, waste or petroleum and chemical products and wastes as defined in the work product, unless otherwise noted, no specific attempt was made to check the compliance of present or past owners or operators of the subject site with Federal, state, or local laws and regulations, environmental or otherwise.
6. If water level readings have been made, these observations were made at the times and under the conditions stated in the report. However, it must be noted that fluctuations in water levels may

occur due to variations in rainfall, passage of time and other factors and such fluctuations may effect the conclusions and recommendations presented herein.

7. Except as noted in the work product, no quantitative laboratory testing was performed as part of the project. Where such analyses have been conducted by an outside laboratory, Consultant has relied upon the data provided and, unless otherwise described in the work product, has not conducted an independent evaluation of the reliability of these tests.
8. If the conclusions and recommendations contained in the work product are based, in part, upon various types of chemical data, then the conclusions and recommendations are contingent upon the validity of such data. These data (if obtained) have been reviewed and interpretations made by Consultant. If indicated in the work product, some of these data may be preliminary or screening-level data and should be confirmed with quantitative analyses if more specific information is necessary. Moreover, it should be noted that variations in the types and concentrations of contaminants and variations in their flow paths may occur due to seasonal water table fluctuations, past disposal practices, the passage of time and other factors.
9. Chemical analyses may have been performed for specific parameters during the course of this project, as described in the work product. However, it should be noted that additional chemical constituents not included in the analyses conducted for the project may be present in soil, groundwater, surface water, sediments or building materials at the subject site.
10. Ownership and property interests of all documents, including reports, electronic media, drawings and specifications, prepared or furnished by Consultant pursuant to this project are subject to the terms and conditions specified in the contract between the Consultant and Client, whether or not the project is completed.
11. Unless otherwise specifically noted in the work product or a requirement of the contract between the Consultant and Client, any reuse, modification or disbursement of documents to third parties will be at the sole risk of the third party and without liability or legal exposure to Consultant.
12. In the event that any questions arise with respect to the scope or meaning of Consultant's work product, immediately contact Consultant for clarification, explanation or to update the work product. In addition, Consultant has the right to verify, at the party's expense, the accuracy of the information contained in the work product, as deemed necessary by Consultant, based upon the passage of time or other material change in conditions since conducting the work.
13. Any use of or reliance on the work product shall constitute acceptance of the terms hereof.

Appendix A

Scope of Work and Restrictions

ALL APPROPRIATE INQUIRY PHASE I ESA SCOPE OF WORK

Fuss & O'Neill uses Standard Practice E 1527-13 as general standard for conducting Phase I ESAs. For consistency, this scope of work is generally presented based on the outline of our standard Phase I ESA report. The descriptions of the procedures and sources for obtaining the information for each section follow the section headings. As specified by Standard Practice E 1527-13, the scope of work described below allows for use of professional judgment to determine the extent to which specific sources are reviewed.

Unless otherwise specified, the following items are not considered in the course of completing an ASTM E 1527-13 Phase I ESA:

- Asbestos, Lead (paint/plumbing), Radon, Mold, Fluorescent Light Ballasts
- Wetlands, Ecological Resources, Historical/Cultural Resources
- Regulatory and Health & Safety Compliance
- Endangered species

These items typically present little environmental risk to the grounds of a site; however, these items may be liabilities during property transfer, regulatory audits, construction, renovation, or demolition projects.

1.0 Introduction

The objective of the ESA and the party that this ESA was conducted for are identified in this section.

2.0 Site Overview

2.1 Site Information

2.1.1 Property Location, Size of Parcel, and Site Plan

Review of USGS topographic maps, local assessor and zoning maps and property description cards, field observations and sketches, and, if available, plans provided by a contact for the subject site. A site plan is included that is derived from these sources.

2.1.2 Potable Water Supply and Sewage Disposal

Query the local Department of Public Works, local Engineering Department, appropriate local utilities, and/or other local municipal sources and/or a knowledgeable site contact.

2.1.3 Adjoining Land Use

Site reconnaissance and assessor's mapping.

2.2 Physical Setting of Site

2.2.1 Geologic and Physiographic Setting

Site reconnaissance, USGS topographic maps, and available geological maps.

2.2.2 Groundwater

Site reconnaissance, USGS topographic maps, and RIDEM Rules and Regulations for Groundwater Quality.

2.2.3 Surface Water

Site reconnaissance, USGS topographic maps, RIDEM Water Quality Regulations, and RIDEM List of Impaired Waters (303d List).

2.2.4 Location of Public Water Supply Sources

Site reconnaissance and mapping available in local departments queried as part of the ESA.

2.3 Previous Environmental Investigations

Provided by the appropriate site contact or identified by other means during the course of conducting the ESA.

3.0 Site History

Site reconnaissance, knowledgeable site contacts, aerial photographs available from RIGIS, Sanborn fire insurance maps and street directories provided by an environmental database search service (note that street directories are reviewed at approximately five year intervals, but may be reviewed at smaller intervals for multi-tenant properties), and local municipal sources (local municipal Building Department, Engineering Department, Planning and Zoning Department, Health Department, and Fire Marshal).

4.0 Federal, State, and Local File Review

4.1 Summary of Regulatory Database Information

Regulatory databases specified by Standard Practice E 1527-13 are reviewed using an environmental database search service.

The report provided by the environmental database search service is reviewed in detail. Sites that are inferred to present a significant risk to adversely impact the subject site are identified and explained within the ESA report. However, sites inferred to pose little risk to adversely impact the subject site are disclaimed within the attached environmental database search report.

4.2 RIDEM File Review

Limited RIDEM file information is provided for the subject site and nearby properties in an environmental database search report. Reviews of files maintained by RIDEM are not conducted unless specifically requested.

If a file review is to be conducted, files for the subject site and/or nearby properties are requested from the RIDEM Office of Technical and Customer Assistance. If available, these files are reviewed for pertinent information, which is either copied or noted.

4.3 Local File Review

Files for the local municipal Tax Assessor, Building Department, Planning and Zoning Department, Health Department, and Fire Marshal are reviewed.

5.0 User Provided Information

Information provided by the user as required by the practice is discussed in this section

6.0 Site Reconnaissance, Interviews and Non-Scope Considerations

Field observations the results of required interviews are discussed in this section. In addition, surveys conducted to identify non-scope considerations are addressed.

7.0 Data Gaps, Findings and Conclusions

Data gaps relevant to the identification of recognized environmental conditions are discussed. In addition, recognized environmental conditions are summarized in this section as well as recommendations for further investigation, if appropriate.

8.0 References

References used as part of the ESA are presented here.

DJ: [unclear] 7/5/83

Description of Portion of Lot 15 on City of Woonsocket
Tax Assessor's Plat 20, dated January 1983, to be
Deeded to the City of Woonsocket.

Beginning at a point in the westerly street line of Winter Street, Woonsocket, Rhode Island, said point being formed by the intersection of the westerly street line of Winter Street and the northerly street line of Privilege Street;

- Thence (1) turning a clockwise angle of ninety degrees (90°) from the northerly street line of Privilege Street and traveling in a southerly direction along the westerly street line of Winter Street, a distance of two hundred fifty nine and forty five hundredths (259.45') feet to a point;
- Thence (2) turning a counterclockwise angle of one hundred seventy four degrees, forty nine minutes, zero seconds (174°-49'-00") from line (1) and traveling in a southerly direction along the westerly street line of Winter Street, a distance of eighty two and forty seven hundredths (82.47') feet to a point of curvature;
- Thence (3) turning and traveling in a southerly and westerly direction along the arc of a curve to the right having a radius of twenty three and eleven hundredths (23.11') feet along the westerly and northerly street line of Winter Street, a distance of twenty four and seventy three hundredths (24.73') feet to a point;
- Thence (4) turning a clockwise angle of one hundred thirteen degrees, thirty one minutes, zero seconds (113°-31'-00") from the northerly street line of Winter Street and traveling in a northerly direction along the easterly property line of lot 11 on said plat 20, a distance of one hundred twenty seven and twenty four hundredths (127.24') feet to a point;
- Thence (5) turning a counterclockwise angle of one hundred seventy five degrees, seventeen minutes, zero seconds (175°-17'-00") from line (4) and traveling in a northerly direction along the easterly property line of said lot 11, a distance of one hundred and thirty four hundredths (100.34') feet to a point;
- Thence (6) turning a counterclockwise angle of one hundred eighty four degrees, forty three minutes, zero seconds (184°-43'-00") from line (5) and traveling in a northerly direction along the easterly property line of said lot 11, a distance of one hundred thirty three and forty five hundredths (133.45') feet to a point;
- Thence (7) turning a counterclockwise angle of ninety degrees, one minute, zero seconds (90°-01'-00") from line (6) and traveling in an easterly direction, a distance of twelve and ninety hundredths (12.90') feet to the point and place of beginning.

THE ABOVE DESCRIBED PARCEL CONTAINS 5,606 SQUARE FEET OF LAND.

ABSTRACT

Garfalo Environmental Services, Inc. in conjunction with Rhode Island Analytical Laboratories, Inc. has conducted an environmental site assessment of the property located CNC International, 20 Privilege Street, Woonsocket, Rhode Island. This assessment is based on site observations during drilling operations and information obtained from state and local records. The purpose of this assessment was to evaluate the release or threatened release of petroleum products or hazardous material on the site; or the possible extent of off-site releases and their environmental impact on this site.

This report discusses the environmental conditions, subsurface exploration and analytical data encountered at the above site.

TABLE 4

APPENDIX

GAROFALO

SITE INVESTIGATION

The site is approximately 7.82 acres and located at 20 Privilege Street, Woonsocket, Rhode Island as seen on a locus plan known as Figure 1. The property is divided by the State borders of Massachusetts and Rhode Island with 5.38 acres located in Woonsocket, RI and the remaining 2.44 acres in Blackstone, Massachusetts. This division line appears on the site plan illustrated on Figure 2. The property is located within the Lawton Mill area of Woonsocket and has 2 buildings that are presently in use. The main structure is a 4 story brick masonry building built in 1896 and a 3 story storage building separated by a small rail system off the Penn Central Railroad system that is adjacent to the property. The portion of the property in Blackstone, MA abuts the Harris Pond and is made up of a bituminous material parking area.

The property also houses an abandoned 3,000 gallon underground storage tank that stored #6 fuel oil (unknown amount of fuel in the tank), a concrete diked area where various above ground tanks are located, a pump station that pumps rinsewater into the Woonsocket sewer system, and a loading dock area where shipping and receiving of chemical products (raw and finish) occurs.

GIROFALO

SITE INVESTIGATION continued...

The above ground tanks store mineral oil, methol alcohol, fuel oil #2, fire retardants, and the finish product according to the present occupant, CNC International.

According to information from Woonsocket City Hall this property falls within the city's zoning area of I-2-Restricted Heavy Industrial District where manufacturing, assembling and fabricating is allowed. The present occupant, CNC International follows the zoning requirements set forth by the City. Research at Woonsocket City Hall provided information that showed no environmental liens exists on this property at the present time. As noted on the Flood Insurance Rate Map (Firm) for the City of Woonsocket, a portion of the property is within the area of 100 year flood boundary with a flood elevation of 171 feet where flood hazards factors have been determined. The City engineers office reported that the property is serviced by City's water and sewer systems. The city's fire prevention office reported that the property has had no spills or fires related to chemical or electrical uses on the property in the last ten (10) years.

GAROFALO

SITE INVESTIGATION continued...

According to records at Woonsocket City Hall the earliest record of ownership was in 1936 when Philip Cohen purchased the property, although the building was built in 1896 and housed the Lawton Spinning Mills until it liquidated in 1935. The Lawton Spinning Mill was the last of the old Yankee Cotton Mill according to the Woonsocket Historical Society. In 1937, the property transferred ownership to B. Cohen & Sons until they sold the property to Catherine Rush and Isadora Cohen et al in 1956. The property transferred owners in 1957 to Jack, Leonard, Benjamin, Harvey & Herbert Cohen and Mort Fisher who owned the property jointly until B. Cohen & Sons, Inc. purchased it later that same year. B. Cohen & Sons Inc. owned the property until Hasbro Industries, Inc. purchased it in 1973. Hasbro Industries held the property for 13 years and used the building for storage of toys.

The present owner, NBC Partnership Ltd., purchased the property from Hasbro in 1986. The present occupant is CNC International a chemical producing corporation. Their main production is blending and reacting of bulk organic chemicals used primarily in the textile, pulp and paper industries. There is no waste product produced and all of the final product is packaged for shipment.

GIROFALO

SITE INVESTIGATION continued...

The prospective buyer (Wickford Capital Group) of this business plans to continue with the present production of organic chemicals and possibly at a later date purchase the property.

GAROFALO

SITE VISITS

Representatives from Garofalo Environmental Services, Inc. visited the site on Privilege Street on 3 June 1988. On 25 and 26 July 1988, monitoring wells numbered 1, 2 and 3 were drilled to a maximum depth of seventeen feet (17'). A visual inspection of the property and its environmental conditions was performed at that time. The 3 wells were constructed of all fitted 2 inch PVC piping with .020 inch screen with a threaded cap. The screen portion of the well is positioned to assure adequate sampling of the soil water interface (the top of the groundwater table, so as to be sure to identify a floating layer of product). Wells numbered 1 and 3 are recessed or flush mount with well #2 having a locking protective cover, these are illustrated in Figures 3 and 4. Well placement was predicated on the location of the underground oil tank, diked area and loading dock area. Also, monitoring well #1 may intercept any groundwater flow into the Harris Pond. Prior to well installation, soil samples were secured from a standard split spoon sampler and field analysis performed. The samples for laboratory analysis were taken from a split spoon sampler at two to five foot intervals. This sampler consists of a longitudinally split tube, or barrel which permits it to be opened so that the soil specimen can easily be examined and placed in a container for sampling. This split spoon also provides soil strata to be identified.

GAROFALO

SITE VISITS continued...

The subsurface conditions encountered at the wells were slightly different. Monitoring well #1 soil strata profile was gravel and sand increasing in darkness of color from the surface layer to the bedrock encountered at a fifteen foot depth. The soil strata profile on monitoring well #3 was similar having a dark brown sand mix with small stones to a depth of 10 feet with the remaining five feet being a dark brown fine sand and silt mixture.

Monitoring well #2 differed slightly from the other soil profiles since the first 3 feet of the well consisted of fill material followed by a light brown stone and sand mix to fine sand at the base of the well ten feet below ground level. These soil types are characteristic to this area of Woonsocket. The U.S.

Department of Agriculture - Soil Conservation Service Soil Survey of Rhode Island shows that this area adjacent to the Harris Pond is of udorthent soils. Udorthents are moderately well drained to excessively drained soils that have been cut, filled or eroded, they consist primarily of loamy sand, sandy loam, fine sandy loam or their gravely analogs. In our situation the soil consist of a gravely sand. The soil strata profiles for each well is presented in Table 1.

GIROFALO

SITE VISITS continued...

Field testing of soil samples was performed utilizing a HNU photoionization meter whereby the detection of volatile organic compounds can be found within the range of 0 to 2,000 parts per million. The HNU photoionization meter is capable of low levels of volatile organic compounds commonly found as constituents of gasoline or as degreasers/solvents. The field results for monitoring well #1 and #3 were less than 1 ppm for volatile organic compounds. Monitoring well #2 detected volatile organic on the HNU meter at a level of 10 ppm from 5 feet to 7 feet in depth below ground level. The remaining depths (0'-5' and 7'-17') of monitoring well #2 detected less than 1 ppm. The soil sample at well #2 that detected a reading of 10 ppm will be submitted to a certified laboratory for further volatile organic testing.

Soil samples at all wells were delivered to a certified laboratory for chemical analysis of Total Petroleum Hydrocarbons (TPH) as explained earlier the soil sample at monitoring well #2 will be analyzed for halogenated volatile organics, and aromatic volatile organics also known as volatile organic compounds. These samples

GAROFALO

SITE VISITS continued...

that were tested for volatile organic compounds were done by using the method of purge and trap, an EPA method. All soil sample results are presented in Table 3.

On 29 July 1988, representative from Garofalo Environmental Services, Inc. visited the site and secured water samples from each monitoring well for analysis. These groundwater samples were delivered to and analyzed by a certified laboratory for purgeable halocarbons (EPA Method 601), purgeable aromatic (EPA Method 602), specific conductance, pH, Soluble Metals, and polychlorinated biphenyl (PCB's). All water samples were taken after a minimum seventy two (72) hour waiting period in order for each well to stabilize. All water sample results are presented in Table 4.

While the groundwater samples were being secured for laboratory analysis, a field screening was also performed for temperature and depth of groundwater. The results are shown below and can also be found in Table 2.

	Groundwater Table	Temperature
MW#1	103.2 inches (8.6 ft)	19 ^o C
MW#2	128.4 inches (10.7 ft)	20 ^o C
MW#3	97.2 inches (8.1 ft)	21 ^o C

GAROFALO

SITE VISITS continued...

The groundwater tables for the wells show that the direction of groundwater flows is to the northeast toward Harris Pond.

As a precautionary measure, an additional water sample was obtained on 4 August 1988 from monitoring well #2. This water sample will be analyzed by the laboratory for purgeable halocarbons (EPA Method 601) and purgeable aromatics (EPA Method 602) these are also known as volatile organic compounds. This sample was tested using a mass spectrometer instrument. When the groundwater samples for MW #2 were obtained, a field screening was also performed. These samples were also field tested for temperature and depth of groundwater. The depth of groundwater was found to be 156" (13 ft.) with a groundwater temperature of 19°C. The depth of groundwater was slightly lower at this sampling possibly to the well stabilization period.

On 18 August 1988, a representative from GESI and Taraco, Inc. visited the site to further investigate the previously confirmed reading of 10 ppm by HNU meter at monitoring well #2.

GAROFALO

SITE VISITS continued...

The backhoe was used to excavate the area just in back of monitoring well #2 referred to as Test Hole #2 on Figure 2. The first composite sample was taken from zero to five feet (0-5') where GES found fill material consisting of brick, granite, tar paper, rubber, steel and boulder debris. The second composite sample was taken from from five to eleven feet (5-11') where we encountered a rusty brown medium course sand.

Prior to the composite samples being collected the backhoe operator spread the soil from zero to five feet (0-5') and then five to eleven feet (5-11') on the ground so a scan of this material could be done using the HNU meter. The HNU meter recorded less than 1 ppm for volatile organic compounds on both of the scans done. The HNU meter was also used to scan the hole prior to backfilling. This also recorded less than 1 ppm for volatile organic compounds in the hole. The soil strata profile for Test Hole #2 is illustrated in Table 1. The two (2) composite soil samples were taken to a certified laboratory to be tested for halogenated volatile organics and aromatic volatile organics using a mass spectrometer test known as EPA Method 624. This will be discussed in the analytical section and the results presented in Table 3.

GIROFALO

ANALYTICAL RESULTS

The soil samples secured from the three (3) monitoring well on 25 and 26 July 1988 were analyzed for the presence of Total Petroleum Hydrocarbons (TPH), and also for volatile organic compounds in well #2.

The TPH results for monitoring wells #1, #2, and #3 were at or below the detectable level of 43 ppm. These results indicate nondetectable amounts of petroleum products and are demonstrative of natural background levels. The soil sample from monitoring well #2 was also analyzed for the presence of volatile organic compounds using the purge and trap method. The purge and trap method detects the 129 EPA Priority Pollutants. Although monitoring well #2 showed nondetectable levels of volatile organic compounds, further testing was required to determine the origin or level of VOC's that were detected using the HNU photoionization meter during our field testing. A second sample was taken from the five to seven feet (5-7') jar and tested on the mass spectrometer instrument for volatile organic compounds. These results are presented in Table 3.

GAROFALO

ANALYTICAL RESULTS continued...

Groundwater samples were secured from all three (3) wells on 29 July 1988. These samples were analyzed for soluble metals, pH, specific conductance, polychlorinated biphenyls (PCB), and volatile organic compounds. The specific conductivity is a function of the amount of dissolved ions measured in a groundwater sample. The level of specific conductance is representative to the nature of the soil. The level of specific conductance also represents the possibility of contaminants in the groundwater. The higher the level detected, the greater chance that contaminants are present. The results of both the specific conductance and pH for all wells were found to be in an acceptable range. The results of the soluble metals were found in trace amounts on the three (3) wells and are below the EPA's Maximum Contaminant Level Goal (MCLG). There were four (4) metals found in trace amounts in well #1 and one each in well #2 and well #3. The metals found in well #1 were Copper, Lead, Mercury, and Zinc; well #2 showed traces of Mercury and well #3 showed Zinc. The levels found do not represent contamination but are indicative of the groundwater's background. The samples were also analyzed for pcb's and volatile organic compounds. The results showed nondetectable levels of polychlorinated biphenyls (PCB's). The

GIROFALO

ANALYTICAL RESULTS continued...

groundwater samples were analyzed for volatile organic compounds using EPA's methods 601 and 602 (purge and trap) which detects the 129 EPA Priority Pollutants. The results for well #1 and #3 were nondetectable for VOC's at these locations. Well #2 detected 1,1,1-trichloroethane at a level of 4 ppb which has a detection limit of 1 ppb, therefore, additional samples from well #2 were secured on 4 August 1988 and tested for VOC's to confirm the reading found in the initial testing.

This second groundwater sample taken from well #2 was analyzed using EPA method 601 and 602 (mass spectrometer instrument) and confirmed the reading of 4 ppb of 1,1,1-trichloroethane from the initial testing. The mass spectrometer instrument is used to detect volatile organic compounds that are not one of the 129 EPA Priority Pollutants. The results of this groundwater analysis is contained in Table 4.

The composite soil samples collected on 18 August 1988 were tested for volatile organic compounds using the mass spectrometer instrument (EPA Method 624), there was a nondetectable level recorded for both the sample from zero to five feet (0-5') and from five to eleven feet (5-11'). These results confirm the earlier laboratory results on soil from monitoring well #2.

GAROFALO

RECOMMENDATIONS

1. The client should consider that, while in all likelihood small amounts of TPH and VOC's on the property are localized in nature, especially in monitoring well #2, that it will be in the best interest to periodically monitor these situations, early indication of a leaking tank or other environmental problem allows the client to minimize future expense and regulatory involvement.
2. The client should have the underground storage tank precision tested and have the tank and its' contents removed.
3. The above ground storage tanks located within the diked area should have a verification of the chemicals that are stored within them. The present occupant indicated their contents, however, these tanks should be rechecked for verification.
4. The diked area should be able to hold one and a half (1 1/2) time the volume of the tank or tanks in the diked area, also some of the tanks appear to be non-permanent structure that may become unstable and may lead to future problems.

GAROFALO

RECOMMENDATIONS continued...

5. As per one of the clients concerns, we recommend that a meter-monitor system be used on the water lines coming into the building and at the various points of travel and where the water is discharged. This may help to better determine where the water is being used and where it is being lost.

GAROFALO

CONCLUSIONS

An environmental site assessment was conducted at the site located at CNC International, 90 Privilege Street, Woonsocket, Rhode Island. The assessment included site visits, a review of the site history, a limited field evaluation program, and screening analyses of soil samples by Garofalo Environmental Services, Inc.

Based on the studies conducted and observations made as part of the present assessment, it is GES's opinion that the available evidence indicates that hazardous material or petroleum products have not been released into the environment at the site nor has an audit of the facility found environmental contamination or hazardous waste in the facility. We feel that this report satisfies your needs as they relate to an environmental site assessment for the purpose of property transaction. If you have any additional questions or needs, please feel free to contact us at (401) 273-6000.

GIROFILO

LIMITATIONS

All observations in this report were made under the conditions as stated. Our conclusions are based upon the previously documented observations; limited quantitative laboratory chemical analysis was performed as part of this report. If conditions develop in the future warranting chemical analysis, they should be brought to the attention of GES for further investigation and documentation of source and conditions. Future discoveries after review by GES, may merit modification of the conclusions of this report.

The nature of this study was to assess on a limited basis the characteristics of the Woonsocket Assessor's Plat No.21A, Lot 11, and Blackstone's Assessor's Plat 4, Lot 29 as they relate to the release or disposal of hazardous waste and petroleum products. No evaluation was done to document compliance by present or past owners of the site with federal, state, or local laws and regulations.

This study was prepared for Mr. Bruce Moger, Wickford Capital Group, 18 Bay Street, Wickford, RI 02852. This report is for the sole use of the client and should not be represented, reproduced, or disseminated without the written approval of GES.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 04/11/2019 has revealed that there

EXECUTIVE SUMMARY

is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 4 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

RI SHWS: This list includes sites that have been investigated under the Federal CERCLIS program (SFA sites) as well as sites that have notified under the state program or have been investigated for hazardous substances (HWM sites).

A review of the RI SHWS list, as provided by EDR, and dated 04/10/2019 has revealed that there are 21 RI SHWS sites within approximately 1 mile of the target property.

RI AST: The Aboveground Storage Tank database contains registered ASTs. The data come from the Department of Environmental Management's Master List of AST Facilities & Their Associated Tanks.

A review of the RI AST list, as provided by EDR, and dated 04/03/2019 has revealed that there is 1 RI AST site within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/25/2019 has revealed that there are 5 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

BLACKSTONE VALLEY GA	FRONT AND COURT STS	S 1/2 - 1 (0.900 mi.)	67	169

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: Yes
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

FINDS:

Registry ID: 110035831222

Environmental Interest/Information System

Rhode Island - Permits, Licenses and Other Vital Environmental Records (RI-PLOVER) is the Rhode Island Department of Environmental Management's regulatory programs' information management system.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

TSCA SUBMITTER

AIR SYNTHETIC MINOR

AIR EMISSIONS CLASSIFICATION UNKNOWN

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Rhode Island - Permits, Licenses and Other Vital Environmental Records (RI-PLOVER) is the Rhode Island Department of Environmental Management's regulatory programs' information management system.

AIR EMISSIONS CLASSIFICATION UNKNOWN

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

. Waste code: D006
. Waste name: CADMIUM

. Waste code: D007
. Waste name: CHROMIUM

. Waste code: D008
. Waste name: LEAD

. Waste code: F001
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F006
. Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

FINDS:

Registry ID: 110000820069

Environmental Interest/Information System

Rhode Island - Permits, Licenses and Other Vital Environmental Records (RI-PLOVER) is the Rhode Island Department of Environmental Management's regulatory programs' information management system.

AIR EMISSIONS CLASSIFICATION UNKNOWN

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/11/2019	Source: EPA
Date Data Arrived at EDR: 04/18/2019	Telephone: N/A
Date Made Active in Reports: 05/14/2019	Last EDR Contact: 07/02/2019
Number of Days to Update: 26	Next Scheduled EDR Contact: 10/14/2019
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Date of Government Version: 10/15/1991

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/11/2019

Next Scheduled EDR Contact: 10/14/2019
Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Next Scheduled EDR Contact: 10/28/2019
Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 04/11/2019	Source: EPA
Date Data Arrived at EDR: 04/18/2019	Telephone: 800-424-9346

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 03/25/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/27/2019	Telephone: (888) 372-7341
Date Made Active in Reports: 04/17/2019	Last EDR Contact: 06/26/2019
Number of Days to Update: 21	Next Scheduled EDR Contact: 10/07/2019

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/25/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/27/2019	Telephone: (888) 372-7341
Date Made Active in Reports: 04/17/2019	Last EDR Contact: 06/26/2019

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 03/25/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/27/2019	Telephone: (888) 372-7341

Number of Days to Update: 21	Next Scheduled EDR Contact: 10/07/2019
	Data Release Frequency: Quarterly

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/25/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/27/2019	Telephone: (888) 372-7341

Federal institutional controls / engineering controls registries

LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 02/22/2019	Source: Department of the Navy
Date Data Arrived at EDR: 03/07/2019	Telephone: 843-820-7326
Date Made Active in Reports: 04/17/2019	Last EDR Contact: 05/10/2019
Number of Days to Update: 41	Next Scheduled EDR Contact: 08/26/2019
	Data Release Frequency: Varies

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 01/31/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 02/04/2019	Telephone: 703-603-0695
Date Made Active in Reports: 03/08/2019	Last EDR Contact: 05/29/2019
Number of Days to Update: 32	Next Scheduled EDR Contact: 09/09/2019
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 01/31/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 02/04/2019	Telephone: 703-603-0695
Date Made Active in Reports: 03/08/2019	Last EDR Contact: 05/29/2019
Number of Days to Update: 32	Next Scheduled EDR Contact: 09/09/2019

MA BROWNFIELDS: Completed Brownfields Covenants Listing

Under Massachusetts law, M.G.L. c. 21E is the statute that governs the cleanup of releases of oil and/or hazardous material to the environment. The Brownfields Act of 1998 amended M.G.L. c. 21E by establishing significant liability relief and financial incentives to spur the redevelopment of brownfields, while ensuring that the Commonwealth's environmental standards are met. Most brownfields are redeveloped with the benefit of liability protections that operate automatically under M.G.L. c. 21E.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ESE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
44007C0069G	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
44007C0088G	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
BLACKSTONE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Udorthents

Soil Surface Texture: Not reported
Hydrologic Group: Not reported

Soil Drainage Class: Unknown
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	11 inches		Not reported	Not reported	Max: 141.14 Min: 42.34	Max: 6 Min: 3.6
2	11 inches	25 inches		Not reported	Not reported	Max: 141.14 Min: 42.34	Max: 6 Min: 3.6
3	25 inches	59 inches		Not reported	Not reported	Max: 141.14 Min: 42.34	Max: 6 Min: 3.6

Soil Map ID: 2

Soil Component Name: Udorthents

Soil Surface Texture: variable

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Unknown
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Telephone: 703-358-2171

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Community and Non-Community Wells

Source: Department of Environmental Management

Telephone: 401-277-2234

Includes Community, Non-Transient Non-Community and Transient Non-Community wells.

EPA-Approved Sole Source Aquifers in Rhode Island

Source: EPA

Telephone:

Sole source aquifers are defined as an aquifer designated as the sole or principal source of drinking water for a given aquifer service area; that is, an aquifer which is needed to supply 50% or more of the drinking water for the area and for which there are no reasonable alternative sources should the aquifer become contaminated.

OTHER STATE DATABASE INFORMATION

RADON

State Database: RI Radon

Source: Department of Health

Telephone: 401-222-2438

Radon Test Results

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

Contact: Allen Tevyaw

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Fuss & O'Neill were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

CERTIFICATE OF REGISTRATION
FOR UNDERGROUND STORAGE FACILITIES

In compliance with Chapter 46-12 of the Rhode Island General Laws, as amended and the Regulations for Underground Storage Facilities Used for Petroleum Products and Hazardous Materials, the owner/operator of an underground storage facility located at:

CNC INTERNATIONAL LTD. PARTNERSHIP
20 PRIVILEGE STREET
WOONSOCKET, RI

is issued this Certificate of Registration to operate an underground storage facility based upon the factual representations contained in the Application for Registration (Number 02812) and in accordance with the Regulations for Underground Storage Facilities used for Petroleum Products and Hazardous Materials and any additional terms and conditions stated below:

NONE

This Certificate of Registration can not be transferred to any other person, facility or location without the express written approval of the Director of the Department of Environmental Management, or his designee and in accordance with appropriate regulations.

This Certificate of Registration may be modified or revoked in accordance with appropriate regulations.

Date Signed: 13 September 1988

Letter of Deficiency
97-07-LOD

10 April 1997

Timothy L. Haradon
CNC International, Inc.
20 Privledge Avenue
Woonsocket, RI 02895

Dear Mr. Haradon,

In accordance with Air Pollution Control Regulation No. 29 - Operating Permits, Section 29.4.2, correspondence was sent, on 13 November 1996, from the Rhode Island Department of Environmental Management - Office of Air Resources to notify you that your facility was required to submit a timely and complete operating permit application within 90 days after receiving notice from the Office. The operating permit application was due 1 March 1997 as identified in the Office's Transition Plan which was previously sent to you.

As of 9 April 1997, the Rhode Island Department of Environmental Management has not received an application for an operating permit. This is a violation of Air Pollution Control Regulation No. 29 - Operating Permits which reads in part as follows:

29.4 General Requirements for Application Submissions

29.4.1 For all stationary sources subject to this regulation, as described in section 29.2, the owner or operator shall submit a timely and complete permit application in accordance with this section.

Timely Application

29.4.2 (a) On or after 18 May 1995, timely and complete operating permit applications shall be submitted to the Division within (90) days of receipt of notice, by certified mail, from the Division that such application to the Division is required.

CNC International, Inc. may be eligible to apply for an Emissions Cap as provided for in Air Pollution Control Regulation No. 29 - Operating Permits. Sources with actual emissions below the major threshold may apply for an emissions cap if they meet certain criteria. An emissions

sh to receive the
services (for an extra

Addressee's Address

Restricted Delivery
postmaster for fee.

iber

392 136

Return Receipt Service.

cap must be federally enforceable and include some combination of production and/or operational limitations to ensure that emissions are limited by quantifiable and enforceable means. An emissions cap would relieve the stationary source from the requirement of having to obtain an operating permit. Therefore, by 15 May 1997, CNC International, Inc. shall either:

1. File an application for an emissions cap; or
2. File an application for an operating permit.

Failure to do either of the above by 15 May 1997 will result in the initiation of further enforcement action against your facility. Any enforcement action may include an administrative penalty of up to one thousand dollars (\$1000.00) per day per violation being assessed at the facility.

Should you have any questions do not hesitate to contact me at (401) 277-2808.

Sincerely,

Barbara Cesaro

Dear Mr. Ball:

Enclosed please find MSDS's for the three types of petroleum process oils, which along with #2 fuel oil, are stored in above ground tanks at our facility.

I've summarized our interview with C.N.C.'s owner, and we will begin work on updating our storage system, seeing to inspection schedules, and sending in the tank registration forms.

Also enclosed is a business card with our phone and fax numbers if you have further questions.

Sincerely,

Timothy L. Haradon

LETTER OF DEFICIENCY

May 29, 1997

Timothy Haradon
CNC International
20 Privilege St.
P.O. Box 3000
Woonsocket, RI 02895

Re: AST No. 97-04

Dear Mr. Haradon:

On 20 May 1997 personnel from this Division conducted an inspection of CNC International in order to determine the facilities compliance with the rules and regulations promulgated pursuant to the Rhode Island Oil Pollution Control Regulations (OPC).

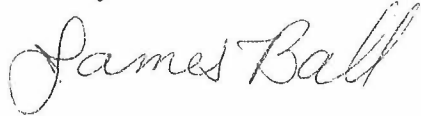

As a result of that inspection, it has been determined that CNC International is out of compliance with the following requirements of the aforementioned Regulations:

1. The aboveground storage tank (AST) must be equipped with a gauge or a high level alarm. Section 10 (b)(4).
2. The owner or operator of the facility must conduct monthly inspections and maintain reports for each inspection. Section 10 (d)(1)-(3).

It is imperative that this facility be brought into compliance immediately. Therefore, the Department requires, within thirty days (90) from the date you receive this letter, that you initiate the appropriate steps and/or a plan to comply with the regulations.

If you have any question concerning this letter, please contact me at 277-3872 x7129.

Sincerely

A handwritten signature in cursive script that reads "James Ball".

AST INSPECTION

Number of tanks Total Gallons

FINDINGS

I met with the company owner Bruce Moger to inspect his ASTs. I was shown an outdoor cement containment area with 9 tanks. Bruce stated that 7 were empty, 1 had a small amount of alcohol (he didn't know which one) and a 5000 gal tank with approx. 200 gal of heating oil remaining in it. The heating oil tank was marked. No markings on any other tank. I advised him to mark the tanks appropriately and close out the tanks he wasn't using. In walking through the facility I noticed a large metal and glass case with small bottles of chemicals stored on shelves. It appears that these chemicals have been there and neglected for a long time. At least 2 containers has breached and leaked their contents onto the shelf. Bruce stated that he did not have a chemist to assist as he could not afford one and his company has on the verge of bankruptcy for years. I inquired as if he had submitted his Tier 2 for 2016 for all of the chemicals he has and he stated he had not.

CNC Chemical was not found in the Tier 2 database.

I advised Bruce that I would notify RCRA to guide him on getting his facility in compliance.

AST INSPECTION

Number of tanks

Total Gallons

FINDINGS

Chief Walsh reported that there was a small fire at the chemical building due to vandals. Vandals also had spilled some containers of chemicals which caused 3 police officers to be taken to the hospital for exposure to a substance that caused irritation to their eyes. Hazmat team and decon team were brought in. First recon produced pictures of the spilled containers. The manager for CNC John Salapa identified the containers as a off spec defoamers and surfactants. The old containers of chemicals and newer containers being currently used were intact. John stated that the facility has been broken in to a few times lately. There is no alarm system. I advised John that they should consider adding security and removing chemicals they no longer use. John stated that there are chemicals dating back 40 years from previous operations. I had spoken to the owner Bruce Boyer about this issue when I was there for an AST inspection about a month ago. I then referred the site to OCI for a RCRA inspection. Bob Nero was there 8/18 for that RCRA inspection.

8/22 I spoke with Bob Nero about the incident and requested that Tom Campbell work on the Tier 2 submittal issue.

RE: Notice of Intent to Enforce for CNC International, Inc. d/b/a CNC International LP
OC&I File No. HW-17-69

Dear Mr. Moger:

Enclosed please find a *Notice of Intent to Enforce* ("NIE") issued to you concerning an alleged failure to comply with the Rhode Island Department of Environmental Management's Rules and Regulations for Hazardous Waste Management, as is or as amended.

A written response is required within seven (7) days, stating your intentions of complying with the required actions in the time frame indicated. Failure to comply with the requirements of this NIE will result in the issuance of additional enforcement action by this Office, which would include the assessment of administrative monetary penalties. You should be aware that administrative penalties of up to \$25,000 per day of violation are authorized under the *General Laws of Rhode Island*.

If there are any questions or concerns, you may contact Sean Carney via telephone at (401) 222-1360, Ext. 7411, or via electronic mail at Sean.carney@dem.ri.gov or me at 222-1360, ext 7407.

PLEASE NOTE: Communication in any form other than writing shall not be deemed a satisfactory response to this NIE.

Sincerely,

Tracey D'Amadio Tyrrell
Supervising Environmental Scientist

IN RE: CNC Internation, INC
d/b/a CNC International LP

CASE NO.: OCI-HW-17-69

NOTICE OF INTENT TO ENFORCE

A. Introduction

Pursuant to *Sections 42-17.1-2(21) and 42-17.6-3 of the Rhode Island General Laws* ("R.I.G.L."), as amended, you are hereby notified that the Director of the Department of Environmental Management (the "Director" of "DEM") has reasonable grounds to believe that the above-named parties ("Respondents") have violated certain statutes and/or administrative regulations under DEM's jurisdiction.

B. Facts

- (1) On June 28, 2017 the Rhode Island Department of Environmental Management (DEM) received a complaint alleging that CNC International LP operating at 20 Privilege Street in Woonsocket, Rhode Island (the "Property") was storing universal waste and solid waste on-site and in compliance with the requirements of the Rhode Island *Rules and Regulations for Hazardous Waste Management*.
- (2) On August 17, 2017 a representative of DEM conducted an inspection of the Property and observed or determined the following:
 - a. Approximately two and one half (2½) cubic yards of small containers holding potentially hazardous chemicals which company personnel described as no longer useful and destined for disposal. When asked by the DEM representative, the Respondent stated that the company has not determined if these materials meet the definition of hazardous waste.
 - b. The Respondent generates hazardous waste and had not attempted to make arrangements with local response authorities to familiarize them with the physical characteristics of the company and the types of hazardous wastes stored and generated on-site.
 - c. The Respondent generates hazardous waste and did not maintain and operate its facility in a manner that minimizes the possibility of any unplanned spill or release of hazardous waste of hazardous waste constituents to the air, soil or surface water of the state by having a sufficient supply of spill prevention and response materials.

waste accumulated onsite and stored universal waste lamps onsite for greater than one year. Additionally, some of this accumulation consisted of broken lamps on the floor and in containers for which the company had failed to manage in a manner which prevents releases to the environment, failed to clean up completely from the immediate floor surface and place in a container as required and failed to determine if the spilled and broken universal waste material and residues were hazardous waste.

- e. Four (4) universal waste used cathode ray tubes which were not marked and not tracked for accumulation time as required.
- f. The Respondent had not informed all employees that handle universal waste of the proper handling and emergency procedures required to manage the universal waste.

C. Potential Violations

Based on the foregoing facts, the Director has reasonable grounds to believe that you have violated the following regulations:

- (1) **Hazardous Waste Regulation 5.3** – requiring that any person who generates a solid waste shall determine if that waste meets the definition of a hazardous waste.
- (2) **Hazardous Waste Regulation 5.15G2**-requiring that a company which generates hazardous waste must make arrangements with appropriate local authorities in accordance with the requirements of 40 CFR 265.37
- (3) **Hazardous Waste Regulation 5.15G1**-requiring that a company which generates hazardous waste must maintain and operate the company in a manner that minimizes the possibility of a fire, explosion or any unplanned spill or release of hazardous waste or hazardous waste constituents to the air, soil or surface water of the State.
- (4) **Hazardous Waste Regulation 13.5** – requiring that a generator of universal waste lamps shall mark the lamps or containers with the words “universal waste”, or “waste” or “used” and the name of the item
- (5) **Hazardous Waste Regulation 13.5**- requiring that a generator of universal waste shall label universal waste used electronic devices with the words “Used electronic devices not containing CRTs” or “Used Electronic devices containing CRTs”.
- (6) **Hazardous Waste Regulation 13.5** – requiring that a generator of universal waste shall track the accumulation time of all UW stored on-site as outlined in 40 CFR 273.15(c)
- (7) **Hazardous Waste Regulation 13.5**- requiring that a generator of universal waste shall comply with the one year accumulation time limit for the waste.
- (8) **Hazardous Waste Regulation 13.5**- requiring that a generator of universal waste must manage that waste in a manner that prevents releases to the environment.

- (9) **Hazardous Waste Regulation 13.5**-requirement that a generator of universal waste must immediately clean up and place into a container any universal waste lamp that shows evidence of breakage, leakage or damage that could cause a release of hazardous constituents
- (10) **Hazardous Waste Regulation 13.5**-requirement that a generator of universal waste must determine if universal waste spilled material and residues meet the definition of hazardous waste
- (11) **Hazardous Waste Regulation 13.5**-requirement that a generator of universal waste must inform all employees that handle or manage universal waste of the proper handling and emergency procedures require to manage the universal waste

D. Required Actions:

- (1) **Within thirty (30) days** of receipt of this Notice, complete a waste determination on contents of all containers holding chemical materials at the facility that are destined for disposal or that the company can no longer demonstrate a use in a production activity in accordance with the requirements of Hazardous Waste Regulation 5.3. If the determination process requires the company to submit samples to a laboratory for analysis, the Respondent shall submit a copy of the analytical report **within ten (10) days** of receipt to the DEM Office of Compliance & Inspection. In the event that the waste is determined to meet the definition of a hazardous waste, **the Respondent shall immediately** begin managing the waste in accordance with the applicable requirements of the Hazardous Waste Regulations.
- (2) **Within thirty (30) days** of receipt of this Notice, make emergency response arrangements with appropriate local authorities in accordance with the requirements of 40 CFR 265.37.
- (3) **Within thirty (30) days** of receipt of this Notice ensure that the company is maintained and operated in a manner that minimizes the possibility of a fire, explosion or any unplanned spill or release of hazardous waste or hazardous waste constituents to the air, soil or surface water by providing an adequate amount of spill control materials to address the potential discharge of all hazardous constituents at your facility.
- (4) **Immediately** upon receipt of this Notice, mark all universal waste items or containers holding universal waste with the words “universal waste”, or “waste” or “used” and the name of the item.
- (5) **Immediately** upon receipt of this Notice, label all used electronic devices with the words “Used electronic devices not containing CRTs” or “Used Electronic devices containing CRTs.”

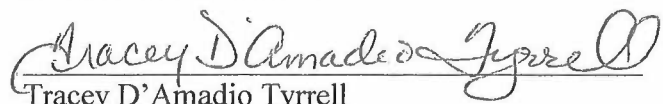

- (6) **Immediately** upon receipt of this Notice, begin tracking the length of time that the universal waste has been accumulated from the date it becomes a waste using one of the methods outlined in 40 CFR 273.16(c)(1-6).
- (7) **Within thirty (30) days** of receipt of this Notice, ship all universal waste that has accumulated onsite for longer than one-year to a properly licensed destination facility.
- (8) **Immediately** upon receipt of this Notice, ensure that all universal is stored in a manner which prevents releases to the environment.
- (9) **Immediately** upon receipt of this Notice, place all universal waste that shows evidence of breakage, leakage or damage and all residues from broken or damaged universal waste into a container.
- (10) **Within thirty (30) days** of receipt of this Notice, determine if any universal waste spilled materials and residues meet the definition of hazardous waste by collecting a representative sample from spillage and submitting the sample to a laboratory for analysis. **Within ten (10) days** of receipt of the analytical report, submit a copy of to the DEM Office of Compliance & Inspection. In the event that collected waste is determined to meet the definition of a hazardous waste, **the Respondent shall immediately** begin managing the waste in accordance with the applicable requirements of the Hazardous Waste Regulations.
- (11) **Within thirty (30) days** of receipt of this Notice, provide all employees of CNC International LP who handle or manage universal waste, of the proper handling and emergency procedures require to manage the waste.

E. Potential Assessment of Penalty:

This document constitutes a notice of intent to assess an administrative penalty pursuant to *R.I.G.L. Chapter 42-17.6*. If Respondents promptly and satisfactorily comply with the requirements of this NIE, DEM may decide to not assess an administrative penalty. Respondents continued non-compliance will likely result in the issuance of a *Notice of Violation*, which will include the assessment of an administrative penalty. Penalties assessed in a *Notice of Violation* may be as high as \$25,000.00 per violation for each and every day that the violation continues to exist.

If you have any questions concerning this NIE, please contact Tracey D'Amadio Tyrrell, Supervising Environmental Scientist with the Office of Compliance and Inspection at (401) 222-1360, Ext. 7407.
